

Five golden rules for delivering decentralized trial success

The success of decentralized trials hinges on DXP logistics. To minimize negative impact on trials, how can you ensure your DtP and DfP solutions fit the bill?

Here are our five golden rules to follow for delivering an effective central dispensing program through choosing the right DXP logistics solutions and setting your DCT on the path to success:

Acronym directory:

- DtP** - Direct-to-patient
- DfP** - Direct-from-patient
- DxP** - Direct-to-and-from-patient
- DCT** - Decentralized trial

1

Establish central depots for DtP success

Setting up central depots in countries where many trial participants are placed makes treatment shipping to and from patients or local pharmacies easier and faster. Logistics partners with central depot agreements already in place alleviate this burden.

2

Work with a strategic network of pharmacies

Partnerships with strategically located pharmacies in the same market as patients receiving treatment provide compliant storage facilities that relieve the load off clinical trial sites. Working with an established logistics partner allows you to adopt their existing pharmacy network and leverage its influence where new pharmacies are needed.

3

Seek regulatory support

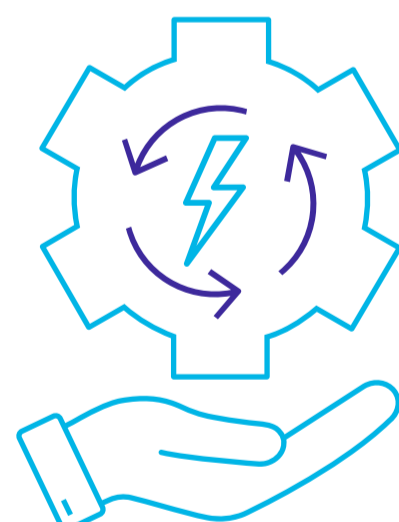

Acquiring support from local regulatory experts is vital to ensure compliance when transporting treatments across international borders and adhering to local data privacy laws. Logistics partners can build a team of experts in the changing local regulatory environment for a smooth transition to a DCT model.

4

Harness the power of automation

Not only can automation help prevent temperature excursions, but it can also optimize the accuracy of any customs forms or other documentation that needs to be completed to streamline the transport process. It is important to seek out and use new technologies that can minimize manual intervention in the transport process. Working with innovative logistics partners enables immediate adoption of their automation solutions.

5

Partner with a single global logistics specialist

Working with one global logistics team reduces the burden of building a network for central dispensing while eliminating the risks associated with handling treatments and supporting documentation from one partner to another.

World Courier offers the solution to DtP trial difficulties.

Harnessing World Courier's unique global logistics infrastructure and network optimizes the delivery of treatments to and from patients and reduces the risk of unforeseen issues for clinical trial sponsors.

World Courier provides the end-to-end support needed to deliver an effective and successful central dispensing model for your DtP solution.
